the 1990s, the number of people with a diagnosis of schizophrenia has increased in many countries (Murray & Lopez 1996).

There is a need to understand the nature of the illness and to identify the factors that influence its course. This paper reports on a study of the experience of people with schizophrenia, with a particular focus on the experience of the illness and the impact of the illness on the lives of people with schizophrenia.

Method

Participants

The study was carried out in a large, multi-site mental health service in the south of England. The service provides a range of services for people with mental health problems, including inpatient, day and community services.

The study was carried out in the community services, which provide a range of services for people with mental health problems, including day and community services.

The study was carried out in the community services, which provide a range of services for people with mental health problems, including day and community services.

		8	Salida de audio jack 3,5 mm hembra
USB TYPE-C 			Ordenador / Tableta / Teléfono móvil/ Nintendo Switch®/ Samsung DEX® (Las compatibilidades varían en función de los fabricantes)

the 1990s, the number of people in the world who are illiterate has increased from 1.2 billion to 1.5 billion.

There are many reasons for this. One is that the population of the world is growing. Another is that the number of people who are illiterate is increasing in many countries, particularly in the developing world. This is because of a number of factors, including a lack of access to education, a lack of resources, and a lack of political will.

One of the main reasons for the increase in illiteracy is the lack of access to education. In many developing countries, there are not enough schools, and the quality of education is poor. This means that many children do not go to school, and those who do often do not learn to read and write.

Another reason for the increase in illiteracy is the lack of resources. In many developing countries, there is a lack of money to invest in education. This means that there are not enough teachers, and the schools are often overcrowded. This makes it difficult for children to learn.

A third reason for the increase in illiteracy is the lack of political will. In many developing countries, the government does not prioritize education. This means that there is not enough money spent on education, and the quality of education is poor.

There are many ways to reduce the number of illiterate people in the world. One way is to increase access to education. This can be done by building more schools, and by providing more resources to existing schools. Another way is to improve the quality of education. This can be done by training more teachers, and by providing more resources to schools.

Another way to reduce the number of illiterate people is to increase political will. This can be done by educating the public, and by putting pressure on the government to invest more in education.

There are many other ways to reduce the number of illiterate people in the world. It is important that we all work together to find solutions to this problem. Only then can we hope to reduce the number of illiterate people in the world, and to create a more just and equitable world for all.

One of the most important things we can do is to ensure that every child has access to education. This means that we need to build more schools, and we need to provide more resources to existing schools. We also need to improve the quality of education, and we need to ensure that every child has a chance to learn.

Another important thing we can do is to increase political will. We need to educate the public, and we need to put pressure on the government to invest more in education. We also need to ensure that the government is accountable for its actions, and that it is using the money it spends on education wisely.

There are many other things we can do to reduce the number of illiterate people in the world. It is important that we all work together to find solutions to this problem. Only then can we hope to reduce the number of illiterate people in the world, and to create a more just and equitable world for all.

One of the most important things we can do is to ensure that every child has access to education. This means that we need to build more schools, and we need to provide more resources to existing schools. We also need to improve the quality of education, and we need to ensure that every child has a chance to learn.
